

Adjustable Gradient Threshold Ramp

configure

AGTR

Steps and raised thresholds are the single biggest barrier to independent access for people with a mobility impairment. Where the threshold and external pavement are not parallel, the Adjustable Gradient Threshold Ramp provides a simple solution which is designed specifically for each site, providing instant access to buildings where a permanent ramp is either impractical or uneconomical.

The 'Building Block' type construction from polyurethane tiles means you can form a ramp of any size or proportion creating straight, cornered and threshold ramps.
